SPLIT SET® MINING SYSTEMS
A DIVISION OF PHOENIX METALFORM

**Ground support solutions
for Metalliferous Mining**

We've got you covered when it comes to

onesteel reinforcing

OneSteel Reinforcing has more than 20 year's experience in designing and manufacturing ground and strata control solutions. Services include custom-designed meshes for roof stabilisation, a complete range of reinforcing bar and accessories, ground retention systems, tunnel and construction solutions.

OneSteel Reinforcing offers:

- Custom-designed products manufactured in NSW, Queensland, Victoria and WA
- Technical design and support services available from National Mining Manager and engineering team
- Extensive distribution network of OneSteel Reinforcing branches.

ground support solutions

ground support

Two key mining industry suppliers have joined forces to offer Total Ground Support Solutions for metalliferous mining applications:

- **OneSteel Reinforcing**
- **Split Set Mining Systems**

Together the businesses offer complete Metalliferous Ground Support Solutions including design, manufacture, supply and technical back-up from mining specialists in key mining regions.

comes to Ground Support

Split Set Friction Rock Stabilisers provide reliable support in a wide range of ground conditions. Comprising just two parts: a bearer plate and a slotted tube, which is driven into a slightly smaller hole, Split Sets exert radial pressure over their full length to better cope with ground movement.

- Manufactured in Australia by Phoenix Metalform: ISO9002 certified
- 100,000s supplied to metalliferous and mining industries each year
- Easy to install, no special tools required
- Safe and easy to handle
- National design, technical support and distribution network
